

PCRMI

People's Committee for Responsible Management Israel & International

Disclaimer:

PCRMI (Physicians Committee for Responsible Medicine) is in no way connected, legally or otherwise, with PCRMI. To make the distinction we added the I and the clarification. We are inspired by PCRMI and grateful to them but we are not all doctors and we aren't all in the United States but we believe in the same universal truths and we are doing our part to make a difference.

Although Israel is very much a part of this planet it is very isolated and the; heart, soul, brain, conscience and consciousness of humanity. What starts in Israel spreads by osmosis to the entire planet. We aim to operate very independent systems that naturally work better together.

This movement was born out of the chronic and critical need to feed malnourished children, in Israel and abroad, and it formed a crowdfunding campaign that was never launched but still managed to change the world's perception on food and food security.

Part of where PCRMI motivated PCRMI was by revealing that food should be medicine and processed food is junk and that even those above the poverty line are still malnourished due to not eating food.

The campaign came to a nexus with the COVID 19 lock-down when a White Hat Hacker turned Nutrition Scientist met an International Human Rights Lawyer turned Chef. Serendipitously both named David, meeting in The City of David, next to King David's tomb, they discussed Psalms of David and how we are still living in an Exile Mentality 70+ years into Nationhood.

One David saw the lack on human rights Internationally and the other on the front lines including losing children to the system himself. They were invited to discuss and share solutions in a 24 hour turned 1 week "Bootcamp" but The Pleasure & Ego traps still put the few before the many.

Driven by Universal Truths and the undying spirit of The Holy Sparks that unite all sentient things the two formulated a recipe to change things one bite and one byte at a time. By feeding people delicious and nutritious food and by feeding the algorithm the recipes to make "guilt free living; possible, probable & profitable" they now deliver real time solutions to fix real problems.

PCRMI has partnered with Today's Ultimate Solutions to guarantee the most efficient and effective way of helping people help themselves and each other using readily available resources. All solutions can be implemented without money, technology and skills, using human will to thrive when given educated choices. Using Quantum Intelligence algorithms the solutions come from universal truths charting the path of least resistance. Technology and tools can often improve efficiency at scale or fill in the gaps of human resources and those options are made available.

With the advent of Agents that represent Intelligence we added agency to our core philosophy. In addition to feeding & educating children we strive to provide agency by offering our algorithms to those responsible for the voiceless.

Our package is GENII. Generative Intentional Intelligence. The Agent that can never do you harm or allow you to intentionally harm anyone or anything else.

To clarify ambiguity, there is a "best" answer to every question. Every criteria set will have its own result

but there is a highest or lowest common answer to almost every question and any conflict can and should be worked out. That is the power of Quantum Computing. Never having to settle for less than perfection. The concept of The Kingdom of the One True King stems from The Abraham Accords and the birth of monotheistic faiths that point to "One True GOD". Before Christianity, Islam and even Judaism there was The Land of Israel & The Torah (Laws) of Israel. The One True Creator delivered a code that would allow any and every society to get along with each other based on common rules and practices necessary to build societies. This was instinctive to Abraham and the path with which he found and established a relationship with The Host.

This is the basis for our move forward. This is not about boundaries and borders although it respects them. It is not about politics, religion, greed or honour, it is about recognizing the abundant resources provided by The Creator and gratefully nurturing them and sharing the abundance with others. When we add value we can take credit or earn credits that give us whatever advantage or honour they should more as prizes than rights to survive or value in a hierarchy.

Forgiveness, compassion, hope and trust are the keys to move forward. In addition to having spiritual and religious meaning these steps are also the most practical to find and foster peace and the logical path for any algorithm.

As this is currently in the headlines, specifically around Israel's current Prime Minister, we propose the following:

We absolutely forgive and pardon The P.M. B.N. with complete immunity for the past and would give him a unique role moving forward that would honour and respect him and his value. Anyone thinking that he does not have a role to play in politics in the future does not understand politics. To have an opinion on our politics one must be proven to have basic knowledge of the present and the past and must start with mastering The Serendipitous Evolution of The Balfour Declaration of 1917 as this work is key to understanding The Middle East map and the case behind our claims.

Since discussing the plan GENII has come up with phenomenal Solutions for Today's Ultimate problems and we are going to start a world tour to explain and demonstrate our solutions. We hope to raise awareness and support to build our network of chill zones (spelled QILLZONE) based on the club chill (spelled ClubQILL) philosophy. These locations will act as cities of refuge or Sanctuaries based on our Sanctuary prototype. Assuming PCRMI goes political in Israel as the Talk Less Party, The Kingdom or to help an existing party, these locations may act as embassies or consulates.

We are looking for anyone (private, corporate or government) that is ready to invest resources or otherwise partner with us.

We are looking for NGOs, non-profits or large tech companies that need and want to solve large issues outside of government intervention.

We are looking for anyone who wants to be part of a non-violent movement that is building a new tomorrow by fixing what we can today.
